

AHMAD SHAHBAZ

DevOps Engineer

+923113764506 | ahmadwa744@gmail.com | [LinkedIn](#) | [GitHub](#) | Lahore, Punjab, Pakistan

PROFESSIONAL SUMMARY

Detail-oriented DevOps Engineer with hands-on experience in AWS cloud infrastructure, Docker and Kubernetes containerization, and CI/CD pipeline automation. Skilled in building pipelines with GitHub Actions and Jenkins. Proficient in monitoring and observability using Prometheus and Grafana. Committed to delivering scalable, high-availability, production-ready solutions.

TECHNICAL SKILLS

Cloud Platforms: AWS (VPC, ECS, EKS, Lambda, ALB, S3, RDS, IAM, Secrets Manager, CloudWatch)

Containers & Orchestration: Docker, Kubernetes, Helm, ECS Fargate, AKS, Container Registry

CI/CD & GitOps: GitHub Actions, AWS CodePipeline, CodeBuild, CodeDeploy, Jenkins, ArgoCD, SonarQube

Infrastructure as Code: Shell Scripting, Python, YAML

Monitoring & Logging: Prometheus, Grafana, Loki, CloudWatch

Networking: Nginx, Reverse Proxy, SSL/TLS, VNet, VPC, Ingress Controllers

Version Control & OS: Git, GitHub, Linux

PROFESSIONAL EXPERIENCE

DevOps Engineer Intern | Fantech Labs

March 2026 – June 2026

- Gained hands-on experience with AWS cloud services for infrastructure setup and Docker for application containerization.
- Deployed scalable, highly available applications on Kubernetes and built automated CI/CD pipelines for multiple web applications.
- Configured Nginx as reverse proxy with Let's Encrypt SSL for secure, production-ready deployments.
- Set up end-to-end observability using Prometheus and Grafana to monitor application health and performance in real time.

PROJECTS

CafeFresco — Full Stack Web Application — *React.js, MongoDB, Docker, Kubernetes (EKS), GitHub Actions, Prometheus, Grafana*

- Deployed full-stack cafe ordering application (with real-time orders, admin dashboard, and role-based authentication) on Kubernetes (EKS) on AWS EC2.
- Containerized the application with Docker and set up automated CI/CD via GitHub Actions for zero-downtime deployments.
- Configured Prometheus and Grafana observability stack for production performance monitoring.

GitHub Actions CI/CD Pipeline — *GitHub Actions, SonarQube, Docker, Trivy*

- Built end-to-end pipeline covering code compilation, SonarQube quality gate, automated testing, Docker build/push, and deployment.
- Integrated Trivy container image scanning and automated rollback on failed health checks to ensure zero-downtime releases.

Pet Clinic App — CI/CD Pipeline Deployment — *GitHub Actions, Docker, Prometheus, Grafana*

- Configured GitHub Actions to automatically build, test, containerize, and deploy Pet Clinic application on every merge to main branch.
- Added Prometheus and Grafana monitoring to track application health and performance post-deployment.

AKS Deployment — Collaborative Workspace — *Azure AKS, VNet, Kubernetes*

- Deployed collaborative workspace on AKS with Horizontal Pod Autoscalers, persistent storage, and ingress controllers for high availability.
- Secured database via VNet integration and private endpoints for enhanced security.

EDUCATION

B.S. Information Technology | University of Okara

September 2022 – June 2026
